

U.S. Counterinsurgency Strategy and Domestic Resilience

An Evidence-Led Synthesis for Non-Kinetic Early Warning, Public
Accountability, and Civil Protection

Build date: February 05, 2026

Prepared as a public-facing, non-kinetic framework (aggregate data; civil-liberties first).

Intended use: civic resilience, transparency, and early warning. This document does **not** provide guidance for violence or evasion of law enforcement. All recommended actions are lawful, nonviolent, and centered on civil rights.

Version: 1.0 (111-page synthesis + appendices)

Executive Abstract (1/4): Purpose, scope, and constraints

This report aggregates what U.S. counterinsurgency doctrine and research learned about how states lose and regain legitimacy under conditions of organized political violence-and translates the non-kinetic, population-protection logic into a domestic civic-resilience framework.

Scope: U.S. COIN strategy, its empirical lessons (especially RAND-style comparative findings), the information and psychological dimensions (IO/MISO), and a concrete blueprint for a transparent public early-warning and response capability.

Constraints: Domestic application must be rights-respecting. This report avoids tactics aimed at coercion, intimidation, or targeting of individuals. The aim is to reduce harm by strengthening lawful oversight, dispute resolution, and service reliability.

Deliverables: (a) a synthesis of COIN strategy, (b) a prevention-oriented domestic analogue, (c) an indicator catalog (120 signals) with privacy notes, (d) a data-source catalog (open and paid DaaS), and (e) worksheets and templates for public reporting.

Core idea: COIN is primarily a political contest over legitimacy. The domestic analogue is not militarization—it's building stronger civic feedback loops and protections that keep legitimacy from collapsing.

Executive Abstract (2/4): What U.S. COIN doctrine converged on

Across revisions and service variants, U.S. doctrine converges on a blunt conclusion: insurgencies thrive where people experience the state as predatory, arbitrary, or absent.

The practical corollary is the famous inversion: the objective is not to destroy an enemy force, but to protect the population and improve the perceived fairness and competence of institutions.

Force can create breathing room, but excessive or indiscriminate force is strategically self-defeating because it manufactures grievances faster than it removes insurgents.

Effective COIN therefore synchronizes security with governance, rule of law, economic stability, and credible communication-measured by effects on people, not outputs produced by institutions.

The COIN paradox: the more you protect the population by coercion, the less you protect them in legitimacy terms. Legitimacy is fragile; once broken, information campaigns rarely repair it.

Executive Abstract (3/4): Empirical findings and why they matter

Comparative research repeatedly finds that outcomes are driven by **clusters** of political and administrative actions rather than a single tactic. Success correlates with simultaneously improving population security, reducing abuses, delivering basic services, splitting moderates from hardliners, and reducing external support.

The failure modes are also clustered: corruption + impunity + abusive security forces + service breakdowns + elite polarization + uncorrected misinformation = a predictable recipe for unrest.

For domestic prevention, this implies we should monitor multi-signal stress patterns across traditional socio-economic geographies (counties, MSAs/CBSA, census tracts) and industry exposure (NAICS, labor markets).

Design principle: publish only aggregate indicators with clear coverage notes; require human review and appeals; and separate fast, noisy signals (media) from slower ground-truth series (filings, budgets, services).

Executive Abstract (4/4): The domestic 'next part'-a resilience program, not a COIN program

The domestic objective is to keep conditions from approaching insurgency dynamics: reduce incentives for political violence by improving nonviolent channels for redress and by hardening the public against manipulation.

This means investing in: independent oversight, FOIA and procurement transparency, robust local journalism, legal aid, election administration capacity, service reliability, and de-escalation infrastructure.

The analytics objective is to provide a **public** early-warning system-MSA-aligned-built from open data wherever possible, supplemented by licensed DaaS for analyst triage, and governed by strict privacy and civil-liberties safeguards.

The tactical objective is boring by design: faster correction of failures, faster dispute resolution, and fewer incentives for people to take conflicts into the street or into armed organizations.

Output of the program: a public dashboard and quarterly reports that show where legitimacy strain is rising, what drivers are most responsible, and what nonviolent interventions reduce risk—without surveilling individuals.

Summary of Findings (1/5): What COIN strategy got right

F1. Legitimacy is measurable and operational. Doctrine treats legitimacy as a real variable: it rises with perceived fairness, competence, and restraint-and collapses with corruption, impunity, and indiscriminate force.

F2. Population security is a prerequisite, not the endpoint. Security creates time for reforms; reforms create durable security.

F3. Rule of law matters more than messaging. Credible courts, predictable enforcement, and transparent procurement reduce recruitment into violent alternatives.

F4. Local partners are decisive. COIN usually succeeds or fails through host-nation institutions; outsiders cannot substitute for legitimacy.

Domestic analogue: focus on civic institutions and public accountability rather than 'countering' fellow citizens. Prevention is governance + rights + services.

Summary of Findings (2/5): What COIN strategy learned the hard way

F5. Civilian harm is strategic harm. Collateral damage and abusive practices reliably create durable backlash.

F6. Metrics can lie. Body counts and output metrics are gameable; effects on population behavior and beliefs are harder-but essential.

F7. Corruption is not a side issue. It is often the insurgency's best recruiter, because it delegitimizes the state.

F8. External support matters. Sanctuary, funding, and propaganda from outside actors can sustain insurgency even when local conditions improve.

Domestic analogue: treat corruption and impunity as public-safety drivers. Track them with transparent data. Treat foreign influence as a financial and informational phenomenon, not a blanket suspicion of dissent.

Summary of Findings (3/5): Influence and non-kinetic doctrine

F9. Credibility is the scarce resource. Information operations work when they align with visible reality; they backfire when they contradict it.

F10. Audience specificity beats broadcast slogans. Influence must be targeted to specific barriers and behaviors (e.g., where to file complaints, how to access aid).

F11. The messenger matters. Local trusted intermediaries outperform distant authorities.

F12. Measure effect, not impressions. Behavioral outcomes (complaint resolution, turnout, rumor correction) matter more than views.

Summary of Findings (4/5): Domestic early warning (signals)

F13. Unrest is usually preceded by clusters. Watch co-occurrence: service breakdowns + housing shocks + corruption scandal + information spikes.

F14. Subnational geography is the right scale. Counties and MSAs capture labor markets, housing markets, and media ecosystems better than national averages.

F15. Use denominators and seasonal baselines. Report per-capita and per-household rates; show z-scores against historic baselines.

F16. Publish caveats. Underreporting and bias are real; public trust requires visible uncertainty and coverage notes.

Design rule: publish fewer, higher-confidence alerts. Use licensed DaaS for analyst triage only; publish outputs from auditable open sources where possible.

Summary of Findings (5/5): Prevention playbook

F17. Strengthen redress channels. Legal aid, ombuds offices, IG hotlines, and transparent procurement reduce grievance fuel.

F18. Stabilize services first. Reliability of power, water, healthcare access, and housing is legitimacy in physical form.

F19. Build de-escalation capacity. Mediation teams, credible community leaders, and protest liaison protocols reduce flashpoints.

F20. Protect civil liberties. Surveillance and overbroad labeling predictably backfire; rights-respecting transparency is the durable approach.

What this report adds: a 120-indicator catalog, a DaaS/open-source map, and a measurement architecture aligned to MSAs, census denominators, and industry exposure (NAICS/SOC).

Part I-V: Core Synthesis (Page 1/34): What counterinsurgency is (and is not)

Key idea: COIN is a strategy for political conflict where an armed challenger competes with the state for control, legitimacy, and compliance. The population is the decisive arena; governance performance is the decisive lever.

Operational implications:

- Treat legitimacy as a variable you can raise or destroy through daily institutional behavior.
- Synchronize security, governance, and communication; mismatched actions and words are fatal to credibility.
- Treat violence as a symptom and amplifier of governance failure, not merely a 'threat actor' problem.

Signals & measures (MSA/county aligned):

- Trust proxies (surveys where available), complaint resolution time, corruption enforcement actions (aggregate).
- Service reliability: outages, hospital strain, housing filings (per 1k households).
- Unrest proxies: protest counts and incident trends (normalized per capita).
- Narrative volatility: machine-coded theme spikes (used only with corroboration).

Domestic analogue

Treat domestic risk as legitimacy strain and dispute-resolution failure, not as an enemy-finding exercise. Build a transparent civic feedback loop: audits, hearings, legal aid, and reliable services.

Caution / boundary

Avoid framing domestic politics as insurgency. The goal is prevention and civil protection, not surveillance or coercion.

Part I-V: Core Synthesis (Page 2/34): Lineage: 'small wars' and the recurrent lesson

Key idea: Across historical small-wars practice, the durable lesson is that punitive, collective coercion breeds resistance, while credible justice and predictable services undercut recruitment.

Operational implications:

- Institutional memory matters: doctrine evolves when failures are acknowledged and recorded.
- The constraint is credibility: coercion may win a street, but it often loses legitimacy.
- The highest leverage is often administrative: courts, permits, procurement, and service access.

Signals & measures (MSA/county aligned):

- Corruption/impunity proxies (dockets, IG reports, audit backlogs).
- Service access inequality (ACS disparities; complaint volumes).
- Policy churn and emergency-order duration (registers).
- Local journalism capacity and information void indicators (context).

Domestic analogue

Use the lesson as a guardrail: transparency and due process are not 'nice to have' - they are stabilization infrastructure.

Part I-V: Core Synthesis (Page 3/34): Vietnam and the body-count pathology

Key idea: Vietnam institutionalized a metrics trap: measuring progress by enemy body counts and sortie rates encouraged perverse incentives and hid political reality. Doctrine later emphasized effects on civilians and governance.

Operational implications:

- Distinguish outputs from outcomes; the former are gameable.
- Prefer metrics tied to lived experience: safety, justice access, service reliability.
- Build an internal 'metrics red team' that hunts for Goodhart effects.

Signals & measures (MSA/county aligned):

- Arrest/detention trends vs conviction/case outcomes (aggregate).
- Civilian harm proxies and complaint trends (where published).
- Trust and participation proxies (turnout, complaint filings).
- Mismatch indicators: optimistic official metrics + deteriorating services.

Domestic analogue

Build dashboards that measure whether peaceful channels work. Never reward agencies for punitive volume.

Part I-V: Core Synthesis (Page 4/34): Post-9/11 tension: counterterrorism vs counterinsurgency

Key idea: Target-centric counterterrorism can disrupt networks quickly, but without political settlement and legitimacy gains it rarely produces durable stability. COIN is slower but aims at the system.

Operational implications:

- Use disruption only when legally justified and paired with governance repair.
- Assume high-visibility coercion can create secondary recruitment and rumor effects.
- Invest in administrative capacity because it scales better than force.

Signals & measures (MSA/county aligned):

- Civil rights complaint volume and litigation rates (aggregate).
- Service breakdown clusters following major enforcement events (temporal correlation).
- Narrative volatility after high-profile incidents.
- Detention duration and backlog metrics (aggregate).

Domestic analogue

Domestic prevention must be civilian-led and rights-respecting; use enforcement as a bounded tool, not a governing model.

Part I-V: Core Synthesis (Page 5/34): FM 3-24 (2006): the doctrine pivot

Key idea: FM 3-24 reframed COIN as protecting the population and improving legitimacy, not maximizing enemy attrition. It emphasized learning, local adaptation, and integrated effort.

Operational implications:

- Prioritize population protection and restraint; legitimacy is the center of gravity.
- Design operations around local political realities and credible partners.
- Institutionalize learning loops: adapt based on measured effects.

Signals & measures (MSA/county aligned):

- Civilian security proxies, complaint resolution, service uptime.
- Partner performance metrics: auditability, transparency, and equity.
- Narrative coherence checks: words vs deeds.
- Corruption enforcement and procurement transparency trends.

Domestic analogue

A domestic analogue is a protect-the-public program: reduce harm by stabilizing services and strengthening oversight, with transparent metrics.

Part I-V: Core Synthesis (Page 6/34): FM 3-24 (2014): insurgencies as systems

Key idea: The 2014 update emphasized insurgencies as social systems embedded in governance failures and identity conflict. It stressed addressing root causes and separating reconcilables from irreconcilables.

Operational implications:

- Treat recruitment as a function of incentives and identity, not ideology alone.
- Reduce grievances by fixing corruption and exclusion mechanisms.
- Offer credible off-ramps that reward lawful participation.

Signals & measures (MSA/county aligned):

- Eviction and unemployment shocks (per 1k), inequality proxies, service access gaps.
- Corruption/oversight signals (audit backlogs, procurement opacity).
- Polarization proxies (survey indices; not individual targeting).
- Participation metrics: hearings attended, complaint filings, turnout.

Domestic analogue

Invest in nonviolent participation pathways: transparent hearings, legal aid, and anti-corruption enforcement.

Part I-V: Core Synthesis (Page 7/34): JP 3-24: joint and interagency reality

Key idea: Joint doctrine recognizes COIN is not Army-only: diplomacy, development, intelligence, and host-nation institutions determine outcomes. Military actions can support but rarely substitute for legitimacy.

Operational implications:

- Treat governance capacity as the decisive asset to build.
- Avoid parallel systems that undermine local institutions.
- Coordinate messaging with visible reforms.

Signals & measures (MSA/county aligned):

- Budget execution and procurement transparency measures.
- Interagency response times to crises (outages, disasters).
- Public trust indicators and complaint throughput.
- Court backlog and public defender capacity (context).

Domestic analogue

Domestic resilience should be interagency and civilian-led: courts, auditors, public health, and utilities are the levers.

Part I-V: Core Synthesis (Page 8/34): Clear-Hold-Build and why sequencing matters

Key idea: Clear-Hold-Build is a sequencing logic: remove violent control, maintain persistent security, and deliver governance and services. It fails when 'build' never arrives or when holding forces behave abusively.

Operational implications:

- Promise only what can be delivered quickly; credibility is fragile.
- Persistent presence and service reliability matter more than episodic crackdowns.
- Service delivery must be equitable to avoid creating new grievances.

Signals & measures (MSA/county aligned):

- Post-crisis service restoration time and equity gaps.
- Complaint volumes after major incidents.
- Protest counts following policy changes or enforcement surges.
- Housing and labor shocks that coincide with service failures.

Domestic analogue

Domestic analogue: (1) stabilize immediate risk (services, de-escalation), (2) maintain predictable rule of law, (3) deliver reforms fast enough to be believed.

Part I-V: Core Synthesis (Page 9/34): Legitimacy as a measurable variable

Key idea: Legitimacy is shaped by daily experiences: fairness, competence, restraint, and accountability. In COIN it is treated as the center of gravity; domestically it is the primary prevention lever.

Operational implications:

- Publish a 'legitimacy drivers' dashboard rather than a 'threat' dashboard.
- Prioritize reforms that are visible and fast (procurement transparency, complaint response).
- Use independent oversight to avoid self-serving metrics.

Signals & measures (MSA/county aligned):

- Complaint resolution time; 311 grievance volume (normalized).
- Procurement non-competitive share by NAICS; audit backlog.
- Eviction filings per 1k renter households; outage minutes per 1k.
- Protest counts per 100k; narrative theme volatility index.

Domestic analogue

Use an MSA-aligned legitimacy driver index and pair it with a public response menu that routes people to lawful channels.

Part I-V: Core Synthesis (Page 10/34): Rule of law and justice sector reform

Key idea: Courts, policing legitimacy, and predictable enforcement determine whether grievances stay nonviolent. Justice-sector performance is therefore a strategic variable.

Operational implications:

- Track backlogs and access to counsel as early-warning stressors.
- Use independent review of use-of-force and detention trends.
- Measure whether reforms reduce complaints and litigation over time.

Signals & measures (MSA/county aligned):

- Court backlog and time-to-hearing metrics (aggregate).
- Use-of-force complaint rates; civil rights investigations (aggregate).
- Public defender caseload ratios; detention durations (aggregate).
- Hate crime incident trends (coverage caveats).

Domestic analogue

Treat court capacity and accountable enforcement as prevention. Publish backlogs and complaint outcomes to rebuild predictability and trust.

Part I-V: Core Synthesis (Page 11/34): Civil affairs, services, and 'governance in the street'

Key idea: Services are legitimacy you can touch. Service failures create openings for alternative governance and escalation dynamics.

Operational implications:

- Treat outage resilience and housing stability as public-safety infrastructure.
- Coordinate service restoration with clear public timelines.
- Audit equity in service delivery after crises.

Signals & measures (MSA/county aligned):

- Utility outage minutes per 1k; boil-water advisories.
- Transit disruptions; clinic closures; ICU capacity.
- Shelter utilization and housing waitlists (where public).
- Insurance/nonpayment signals where publishable (context).

Domestic analogue

Treat services as legitimacy infrastructure. Improve outage response, clinic access, and housing stabilization before messaging campaigns.

Part I-V: Core Synthesis (Page 12/34): Partner forces and the principal-agent problem

Key idea: Where incentives diverge, training alone fails. Accountability, auditing, and political alignment matter more than capacity-building slogans.

Operational implications:

- Design incentives: transparency and audits, not just training.
- Publish procurement data and disciplinary outcomes in aggregate.
- Tie funding to compliance and measurable service outcomes.

Signals & measures (MSA/county aligned):

- Procurement competition flags; single-source awards.
- IG staffing and audit cycle times.
- Leadership churn rates in key agencies.
- Budget opacity proxies (late budgets, missing audits).

Domestic analogue

Align incentives via transparency and audits. Training without accountability is an illusion.

Part I-V: Core Synthesis (Page 13/34): Intelligence: mapping networks and grievances

Key idea: Effective understanding focuses on the system: coercion nodes, money flows, rumor ecology, and grievances. The goal is leverage without repression.

Operational implications:

- Map systems: money flows, narrative spikes, service failures - not identities.
- Use human review before public conclusions.
- Prefer interventions that reduce grievances rather than escalate conflict.

Signals & measures (MSA/county aligned):

- Narrative theme z-scores (machine-coded; corroboration required).
- Funding flow aggregates (FARA/FEC/990 joins).
- Service failure clusters (outages + health strain).
- Protest event changes (counts, locations).

Domestic analogue

Map problems, not people. Use aggregate proxies and publish methods to avoid stigmatization.

Part I-V: Core Synthesis (Page 14/34): Targeting, restraint, and civilian harm

Key idea: Excessive force produces backlash and recruitment effects. Restraint is strategic, not sentimental.

Operational implications:

- Adopt de-escalation and proportionality as default.
- Investigate and publish complaint trends and accountability outcomes.
- Use oversight to prevent cycles of abuse and backlash.

Signals & measures (MSA/county aligned):

- Complaint volume; litigation trends (aggregate).
- Arrest-to-charge and charge-to-conviction ratios (aggregate).
- Protest injuries/arrests (aggregate, careful).
- Misinformation spikes following incidents.

Domestic analogue

Prioritize de-escalation and accountability. The goal is fewer harms and fewer flashpoints, not 'dominance'.

Caution / boundary

No individual-level surveillance. No guilt-by-association. Publish only aggregate indicators and methods.

Part I-V: Core Synthesis (Page 15/34): Detention and interrogation as legitimacy shocks

Key idea: Arbitrary or abusive detention creates durable legitimacy shocks; due process is a stabilizer.

Operational implications:

- Protect due process; publish detention and case outcomes in aggregate.
- Use independent audits of detention conditions.
- Design rapid correction mechanisms for wrongful outcomes.

Signals & measures (MSA/county aligned):

- Detention/charging patterns by jurisdiction (aggregate).
- Court backlog and dismissal rates (aggregate).
- Civil rights complaint rates.
- Jail overcrowding proxies (where published).

Domestic analogue

Protect due process. Publish aggregated detention and case outcomes; create fast correction channels.

Part I-V: Core Synthesis (Page 16/34): Reconciliation, amnesty, and political integration

Key idea: Many conflicts end via settlement and integration of reconcilables. Splitting moderates from hardliners is often higher leverage than annihilation.

Operational implications:

- Build off-ramps for escalation: mediation, restorative pathways, lawful participation.
- Avoid policies that punish peaceful participation.
- Track whether off-ramps reduce recurrence of unrest.

Signals & measures (MSA/county aligned):

- Repeat flashpoints by location (event recurrence).
- Participation in mediation programs; turnout at hearings.
- Survey measures of willingness to use lawful channels.
- Recidivism of protest escalation markers.

Domestic analogue

Build off-ramps and credible participation. Reduce the perceived payoff to escalation.

Part I-V: Core Synthesis (Page 17/34): External sanctuary and regional dynamics

Key idea: External funding, sanctuary, and propaganda can sustain conflict. Transparency and compliance tools matter as much as security.

Operational implications:

- Use transparency tools (FARA/FEC/IRS) with strict legal standards.
- Separate foreign influence indicators from domestic dissent.
- Publish methodology and error bounds.

Signals & measures (MSA/county aligned):

- FARA filings and receipts; FEC receipts (aggregate).
- Cyber incident counts affecting civic services (aggregate).
- High-level narrative coordination indices (cautious).
- Supply-chain disruption proxies (context).

Domestic analogue

Treat external influence as compliance and transparency. Publish methodology and error bounds; avoid broad suspicion.

Caution / boundary

No individual-level surveillance. No guilt-by-association. Publish only aggregate indicators and methods.

Part I-V: Core Synthesis (Page 18/34): Corruption and the shadow state

Key idea: Corruption is alternative governance. Anti-corruption enforcement reduces grievance fuel and removes predatory incentives.

Operational implications:

- Track procurement opacity and audit delays; treat spikes as review triggers.
- Support investigative journalism and IG capacity.
- Publish remediation steps and timelines.

Signals & measures (MSA/county aligned):

- No-bid share by NAICS; changes in award concentration indices.
- Audit delays; ethics hotline volume.
- Corruption press and docket keyword counts.
- Public procurement protest activity (context).

Domestic analogue

Use procurement and audit transparency to reduce grievance fuel. Publish non-competitive award share by NAICS and follow-up remediation.

Part I-V: Core Synthesis (Page 19/34): Urban insurgency and density effects

Key idea: Urban density increases information speed and flashpoint risk; legitimacy and services dominate outcomes.

Operational implications:

- Prioritize protest liaison and crowd-safety protocols.
- Monitor transit/service strain and hospital capacity.
- Pre-position nonviolent resources during high stress.

Signals & measures (MSA/county aligned):

- Protest events per week; hospital ICU > 85% weeks.
- Outage and transit disruptions.
- Housing displacement proxies.
- Emergency-order coverage and duration.

Domestic analogue

In cities, legitimacy and services dominate. Coordinate protest liaison, transit, and health capacity planning.

Part I-V: Core Synthesis (Page 20/34): Measurement discipline: MOE vs MOP

Key idea: Good metrics track effects on people, not institutional activity. MOE vs MOP discipline prevents self-deception.

Operational implications:

- Define MOEs before launching interventions.
- Use baselines and counterfactual thinking to avoid placebo conclusions.
- Publish uncertainty and revisions.

Signals & measures (MSA/county aligned):

- MOE dashboard: complaint resolution, service uptime, eviction stabilization.
- MOP dashboard: messages sent, meetings held (tracked separately).
- Survey trust and rumor prevalence indices.
- Revision/backfill log adherence.

Domestic analogue

Measure effects: did legitimacy drivers improve, did rumor belief fall, did complaint resolution speed up?

Part I-V: Core Synthesis (Page 21/34): RAND synthesis: clusters and pathways

Key idea: Comparative research suggests success is driven by clusters of actions and context; single-variable theories mislead.

Operational implications:

- Require cluster corroboration for public alerts.
- Use context covariates: industry exposure, inequality, service fragility.
- Avoid one-size thresholds across MSAs.

Signals & measures (MSA/county aligned):

- Cluster detection: protests + corruption + housing/service stress.
- External support proxy: funding + narrative spikes.
- Confidence rating and coverage gaps.
- Phase marker: persistence over multiple windows.

Domestic analogue

Use clusters and confidence ratings. Make the system cautious and reversible.

Part I-V: Core Synthesis (Page 22/34): Phase thinking: escalation, stalemate, settlement

Key idea: Phase-based thinking helps match interventions to escalation level; the goal is de-escalation and settlement.

Operational implications:

- Match interventions to phase: early reforms early; de-escalation as tensions rise.
- Use trusted intermediaries to reduce misinterpretation.
- Prepare settlement mechanisms before crises peak.

Signals & measures (MSA/county aligned):

- Phase markers: frequency and intensity of unrest; duration of grievances.
- Institution response speed; de-escalation capacity.
- Media volatility and rumor prevalence.
- Service strain co-occurrence.

Domestic analogue

Phase-match interventions: early transparency early; de-escalation as tensions rise; settlement mechanisms before peaks.

Part I-V: Core Synthesis (Page 23/34): MISO basics: audience, behavior, assessment

Key idea: Influence works when it is credible, audience-specific, and measured by behavior change - not by volume of messaging.

Operational implications:

- Use attributable messaging only; avoid manipulation.
- Prefer local credible messengers.
- Measure behavior outcomes (use of services, complaint filing, rumor correction).

Signals & measures (MSA/county aligned):

- Behavioral outcomes: increased use of services; decreased rumor belief.
- Opt-in communication engagement (aggregate).
- De-escalation outcomes (fewer injuries/arrests).
- Correction adoption rate (survey-based where possible).

Domestic analogue

Use attributable, opt-in civic information: how to vote, how to file complaints, where to get services, how to verify claims.

Part I-V: Core Synthesis (Page 24/34): IO basics: coherence across words and deeds

Key idea: Information operations fail when words contradict deeds. Fixing underlying problems often beats persuasion.

Operational implications:

- Fix the underlying issue before messaging where possible.
- Use radical honesty and publish corrective actions.
- Track credibility via survey and participation metrics.

Signals & measures (MSA/county aligned):

- Gap between official claims and service outcomes (measurable).
- Complaint resolution improvements after interventions.
- Public correction log volume and speed.
- Trust survey deltas (with caveats).

Domestic analogue

Fix first, communicate second. When you must communicate, do it plainly and publish receipts.

Part I-V: Core Synthesis (Page 25/34): Rumor ecology and media dynamics

Key idea: Rumors thrive under uncertainty and low trust. Pre-bunking and rapid, transparent correction reduce spread.

Operational implications:

- Maintain a public correction log and pre-bunk library.
- Coordinate with local media and trusted orgs.
- Track rumor prevalence via surveys and theme indices.

Signals & measures (MSA/county aligned):

- Rumor prevalence; theme z-scores; correction log activity.
- Time-to-correction; reach of trusted messengers (aggregate).
- Misinformation-related incident reports (aggregate).
- Public help-seeking behavior shifts (signals).

Domestic analogue

Build a public correction capability that is fast, local, and humble.

Part I-V: Core Synthesis (Page 26/34): Ethics: legitimacy is a strategic constraint

Key idea: Ethical violations are strategic costs in COIN; domestically civil liberties are non-negotiable constraints.

Operational implications:

- Publish safeguards and a governance charter.
- Conduct annual civil-liberties audits.
- Ensure appeal/correction is accessible.

Signals & measures (MSA/county aligned):

- Privacy incident count: target is zero.
- Appeals volume and outcomes; correction turnaround.
- External audit findings.
- Coverage-note compliance and clarity.

Domestic analogue

Hard-code civil liberties into the system design: minimization, oversight, appeals, audits.

Part I-V: Core Synthesis (Page 27/34): Why COIN fails: time, incentives, and partners

Key idea: COIN often fails due to time horizons, misaligned incentives, and partner predation; prevention requires durable checks.

Operational implications:

- Design systems that do not rely on perfect leaders.
- Institutionalize checks: audits, FOIA, independent review.
- Measure whether reforms survive leadership turnover.

Signals & measures (MSA/county aligned):

- Leadership churn and policy whiplash indicators.
- Audit and oversight capacity trends.
- Resilience of reforms across administrations.
- Public procurement transparency continuity.

Domestic analogue

Design for bad leadership: checks, audits, transparency, and resilient institutions.

Part I-V: Core Synthesis (Page 28/34): What to borrow domestically (and what not to)

Key idea: Borrow legitimacy and measurement discipline; reject coercive population control and domestic targeting logic.

Operational implications:

- Keep the frame civic and rights-first.
- Do not build individual-level surveillance dashboards.
- Do not stigmatize lawful dissent.

Signals & measures (MSA/county aligned):

- Publication geography and suppression compliance.
- Use of ToS-sensitive data in public outputs (should be none).
- Appeals and corrections utilization.
- Stakeholder trust feedback.

Domestic analogue

Be explicit: we are preventing harm, not countering citizens. Keep the program boring and lawful.

Caution / boundary

No individual-level surveillance. No guilt-by-association. Publish only aggregate indicators and methods.

Part I-V: Core Synthesis (Page 29/34): Legitimacy as a civic output: a concrete definition

Key idea: Define legitimacy drivers concretely: fairness, competence, accountability. Measure via proxies tied to lived experience.

Operational implications:

- Build an index of drivers with clear denominators.
- Use MSAs for comparability; counties for coverage.
- Publish methods and versioning.

Signals & measures (MSA/county aligned):

- Index components: eviction, outage, corruption, court backlog, health strain.
- Publish index and components separately for transparency.
- Industry exposure (NAICS employment shares) as context.
- Equity gaps across subareas (aggregate).

Domestic analogue

Define legitimacy drivers in measurable terms and report them by MSA with denominators.

Part I-V: Core Synthesis (Page 30/34): Early warning as cluster detection

Key idea: Cluster detection reduces false alarms: require co-occurrence of independent signals and human review.

Operational implications:

- Use two-tier alerts: analyst review then public notice.
- Require at least two independent sources.
- Document alternative explanations before publishing.

Signals & measures (MSA/county aligned):

- Public alert triggers require co-occurrence plus review.
- Document alternative explanations (storms, holidays).
- Revision and backfill log.
- False positive/negative tracking.

Domestic analogue

Operate an analyst review queue and publish only high-confidence, multi-signal advisories.

Part I-V: Core Synthesis (Page 31/34): Non-kinetic interventions that reduce harm

Key idea: Non-kinetic interventions are governance and services: legal aid, oversight, mediation, and reliability.

Operational implications:

- Prioritize legal aid, housing stabilization, and mediation capacity.
- Improve service reliability and equity.
- Measure effects with MOEs (not PR outputs).

Signals & measures (MSA/county aligned):

- Resource capacity metrics: legal aid availability, shelter beds, mediation teams.
- Service stabilization outcomes.
- Complaint and trust trends after interventions.
- Participation in lawful channels.

Domestic analogue

Build capacity for legal aid, housing stabilization, and mediation - these are prevention tools.

Part I-V: Core Synthesis (Page 32/34): Data architecture for public reporting

Key idea: Public reporting requires reproducible pipelines, provenance, and separation of analyst-only vs publishable sources.

Operational implications:

- Separate publishable open sources from licensed triage feeds.
- Hash raw data and publish transforms.
- Version crosswalks and denominators.

Signals & measures (MSA/county aligned):

- Dataset versioning; pipeline pass/fail tests.
- Crosswalk version pinning.
- Reproducible builds and hashes.
- Data provenance completeness.

Domestic analogue

Keep the pipeline auditable: provenance, versioning, and publishable-only outputs.

Part I-V: Core Synthesis (Page 33/34): Governance, privacy, and appeals

Key idea: The system must be legitimate: transparency, privacy minimization, and a correction/appeal channel.

Operational implications:

- Create an independent review board.
- Implement appeals and correction workflow.
- Minimize data and publish aggregates only.

Signals & measures (MSA/county aligned):

- Governance charter compliance metrics.
- Independent review decisions (aggregate).
- Appeal satisfaction surveys (aggregate).
- Community feedback loops.

Domestic analogue

Make the monitor monitored: public charter, independent oversight, and correction logs.

Part I-V: Core Synthesis (Page 34/34): Implementation roadmap: start in MSAs

Key idea: MSAs are practical units for labor, housing, and media ecosystems. Start with pilots and expand after validation.

Operational implications:

- Start with 3-5 MSAs; validate thresholds and harm minimization.
- Expand coverage using county-to-CBSA crosswalks.
- Pair dashboards with nonviolent response resources.

Signals & measures (MSA/county aligned):

- MSA dashboard completeness score.
- Pilot evaluation: false positives/negatives.
- Equity audits by sub-area (aggregate).
- Resource utilization of nonviolent response menu.

Domestic analogue

Pilot in MSAs to align to labor and housing markets; expand with validated metrics and safeguards.

Appendix A: Data Source Catalog (Page 1/10): Protests and collective action

Purpose: Identify reliable inputs for the indicator system, distinguish publishable open sources from analyst-only licensed sources, and specify alignment to MSA/county geographies.

Open / public sources (publishable aggregates):

Open sources

- CountLove events CSV (protest events; location/date/topics; weekly aggregation).
- Local permitting and road-closure feeds (where open).
- GDELT Events for corroborating media-reported demonstrations (noisy; use as secondary).
- Municipal 311 / complaint portals (grievance volume proxy; codebook dependent).

Paid / licensed DaaS (analyst triage only)

- ACLED U.S. Crisis Monitor (event-coded demonstrations and political violence; licensed).
- Dataminr / Meltwater / NewsWhip (real-time surge detection across media; licensed; ToS bound).

Implementation notes

Publish only aggregated counts at county/MSA/week. Use commercial feeds only to prompt human review, never as a sole public trigger. Track coverage gaps explicitly (e.g., rural undercount).

Appendix A: Data Source Catalog (Page 2/10): Narratives, misinformation, and media dynamics

Purpose: Identify reliable inputs for the indicator system, distinguish publishable open sources from analyst-only licensed sources, and specify alignment to MSA/county geographies.

Open / public sources (publishable aggregates):

Open sources

- GDELT 2.1 GKG (themes/tone; machine-coded; use z-scores vs baseline).
- Platform transparency libraries where available (e.g., ad libraries for political ads).
- Google Trends (search interest; relative; good for anomaly hints).

Paid / licensed DaaS (analyst triage only)

- Brandwatch / Talkwalker / Sprinklr / Meltwater social listening (licensed; ToS constraints).
- Graphika / NewsGuard style analytic reports (licensed; interpretive; use with caution).

Implementation notes

Avoid publishing raw social metrics tied to accounts. Publish only aggregate theme indices with caveats. Require that narrative spikes co-occur with slower ground truth (filings, outages, protests) before public alerts.

Appendix A: Data Source Catalog (Page 3/10): Corruption, oversight, courts, and rule-of-law

Purpose: Identify reliable inputs for the indicator system, distinguish publishable open sources from analyst-only licensed sources, and specify alignment to MSA/county geographies.

Open / public sources (publishable aggregates):

Open sources

- DOJ press releases; U.S. Attorneys offices; agency IG reports (public).
- State AG pressrooms (public; variable structure).
- CourtListener/RECAP docket metadata (public/limited; good for trend counts).
- Federal Register + state registers (policy churn proxy).

Paid / licensed DaaS (analyst triage only)

- LexisNexis / Westlaw (comprehensive legal/news archives; licensed).
- BGov (Bloomberg Government) / GovWin / GovTribe (procurement + oversight intel; licensed).

Implementation notes

Publish monthly counts by MSA/county and include 'source coverage' notes. Use keyword-based classification with human sampling audits to reduce false positives.

Appendix A: Data Source Catalog (Page 4/10): Procurement, public finance, and contracting opacity

Purpose: Identify reliable inputs for the indicator system, distinguish publishable open sources from analyst-only licensed sources, and specify alignment to MSA/county geographies.

Open / public sources (publishable aggregates):

Open sources

- USAspending + SAM.gov (federal awards/solicitations; competition flags; vendor metadata).
- State procurement portals (varies; some provide CSV).
- Municipal open-contracting portals (where present).

Paid / licensed DaaS (analyst triage only)

- GovWin / BGov / GovTribe (vendor networks, award pipelines, opportunity intelligence).
- Specialized compliance/risk platforms (varies by market).

Implementation notes

Compute amount-weighted non-competitive share by state/MSA/month; add NAICS sector filters. Publish aggregates only; never publish individual vendor accusations. Use audits and official findings for any narrative claims.

Appendix A: Data Source Catalog (Page 5/10): Housing stress: evictions, rent burden, displacement

Purpose: Identify reliable inputs for the indicator system, distinguish publishable open sources from analyst-only licensed sources, and specify alignment to MSA/county geographies.

Open / public sources (publishable aggregates):

Open sources

- Eviction Lab filings (where available; county-level; coverage varies).
- ACS (rent burden, overcrowding, poverty; annual/5-year).
- Zillow/Redfin public research series (market trend context; licensing varies).

Paid / licensed DaaS (analyst triage only)

- CoreLogic / ATTOM / Black Knight style property & foreclosure datasets (licensed).
- Commercial credit bureau aggregates (licensed; sensitive).

Implementation notes

Use evictions as a leading indicator, but publish prominent coverage caveats. Align to MSA housing markets (CBSA) using county→CBSA crosswalks; report per 1k renter households.

Appendix A: Data Source Catalog (Page 6/10): Labor markets and economic shock

Purpose: Identify reliable inputs for the indicator system, distinguish publishable open sources from analyst-only licensed sources, and specify alignment to MSA/county geographies.

Open / public sources (publishable aggregates):

Open sources

- DOL ETA weekly initial claims (state/metro proxies depending on release).
- BLS LAUS/CES (unemployment, employment; monthly; MSA available).
- BEA (income, GDP; annual).

Paid / licensed DaaS (analyst triage only)

- ADP-style private payroll indices (licensed).
- Job postings aggregators (licensed or restricted) for sector stress signals.

Implementation notes

Align to MSAs for labor-market reality. Use seasonality-aware baselines. Publish both level and change metrics (z-score, YoY). Avoid over-interpreting single-week spikes.

Appendix A: Data Source Catalog (Page 7/10): Health system strain and EMS capacity

Purpose: Identify reliable inputs for the indicator system, distinguish publishable open sources from analyst-only licensed sources, and specify alignment to MSA/county geographies.

Open / public sources (publishable aggregates):

Open sources

- HHS Protect hospital utilization (county-level ICU capacity; public hub).
- CDC public surveillance series (varies by topic).
- Local EMS dashboards where open (turnaround times; limited).

Paid / licensed DaaS (analyst triage only)

- Definitive Healthcare (facility capacity and closures; licensed).
- Commercial claims aggregates (licensed; sensitive).

Implementation notes

Treat ICU/EMS strain as a modifier of risk (higher strain increases likelihood of cascading crises). Publish at county/MSA-week with suppression rules for small counts.

Appendix A: Data Source Catalog (Page 8/10): Utilities, infrastructure, and internet performance

Purpose: Identify reliable inputs for the indicator system, distinguish publishable open sources from analyst-only licensed sources, and specify alignment to MSA/county geographies.

Open / public sources (publishable aggregates):

Open sources

- DOE/OE event reports; utility outage APIs where public.
- EIA series for energy context.
- M-Lab (internet performance measurements; open).

Paid / licensed DaaS (analyst triage only)

- PowerOutage.us paid API tiers; Downdetector enterprise feeds (licensed).
- Commercial network telemetry providers (licensed).

Implementation notes

Publish outages as customer-minutes-out per 1k population by county/MSA. Use redundancy: utility + DOE + M-Lab to reduce false signals. Avoid publishing facility-level vulnerabilities.

Appendix A: Data Source Catalog (Page 9/10): Elections administration and civic participation

Purpose: Identify reliable inputs for the indicator system, distinguish publishable open sources from analyst-only licensed sources, and specify alignment to MSA/county geographies.

Open / public sources (publishable aggregates):

Open sources

- State/local election boards (precinct changes, wait times where available).
- EAVS (post-hoc administration survey).
- Census CPS Voting & Registration supplement (turnout correlates; periodic).

Paid / licensed DaaS (analyst triage only)

- TargetSmart/Catalist-style voter file analytics (licensed; highly sensitive; avoid public use).
- Commercial election operations dashboards (vendor-specific).

Implementation notes

Public reporting should focus on administration capacity and access (wait times, precinct churn), not on individual-level targeting. Provide equal-access framing and publish methodology.

Appendix A: Data Source Catalog (Page 10/10): Foreign influence, cyber disruption, and threat context

Purpose: Identify reliable inputs for the indicator system, distinguish publishable open sources from analyst-only licensed sources, and specify alignment to MSA/county geographies.

Open / public sources (publishable aggregates):

Open sources

- FARA eFile data; FEC API; IRS 990 aggregates (financial pipes; public).
- CISA KEV and advisories (risk context; indirect).
- State breach notification portals (incident counts).

Paid / licensed DaaS (analyst triage only)

- Recorded Future / Flashpoint style threat intel (licensed; analyst-only).
- Specialized financial risk analytics (licensed).

Implementation notes

Use strict legal standards and publish only aggregate joins. Foreign influence indicators must never be used to delegitimize lawful dissent; treat as a transparency and compliance issue, not an identity label.

Appendix B: MSA, Census, and Industry Alignment (Page 1/5): Why MSAs (CBSAs) are a useful reporting unit

Metropolitan Statistical Areas (MSAs) are Core Based Statistical Areas (CBSAs) defined by the Office of Management and Budget (OMB) using county boundaries and commuting ties. They approximate labor and housing markets, commuting sheds, and media ecosystems.

A practical workflow: ingest data at the finest publishable unit (often county FIPS), then roll up to CBSA/MSA and optionally to Combined Statistical Areas (CSAs). This preserves comparability and supports 'MSA league tables' for legitimacy drivers.

For each indicator, specify: **native geography** (county, city, utility territory), **publication geography** (MSA/county), and **denominator** (population, households, labor force, renter households).

Crosswalks

Use county FIPS as the universal join key. Join to CBSA/MSA/CSA via OMB delineation files or Census crosswalk tables. Keep crosswalk versions pinned by year to avoid drift.

Appendix B: MSA, Census, and Industry Alignment (Page 2/5): Counties vs tracts vs ZIPs: privacy and fidelity tradeoffs

Counties are the most common denominator across federal datasets and are easy to map to MSAs. They are usually safe for public publication when counts are not tiny.

Census tracts and block groups enable finer spatial analysis but increase privacy risk and amplify bias from uneven reporting. Use them for internal analysis only, and publish only after applying suppression or noise methods.

ZIP Code Tabulation Areas (ZCTAs) map well to consumer services but poorly to governance boundaries. Use ZCTAs mainly for service delivery signals (e.g., internet performance) and roll up to counties/MSAs for publication.

Publishing rule

Default public geography: county and MSA. Allow sub-county publication only with explicit privacy review, suppression thresholds, and community appeal mechanisms.

Appendix B: MSA, Census, and Industry Alignment (Page 3/5): Census denominators and comparability

For per-capita rates and denominators, rely on Census population and household estimates (ACS or annual estimates), and keep denominators versioned.

Prefer rates like: incidents per 100k population, evictions per 1k renter households, outages per 1k customers, court backlog per 10k residents, etc.

Because ACS estimates have sampling error, publish uncertainty notes (especially for small MSAs) and avoid false precision in rankings.

Standard denominators

Population, households, renter households, labor force, median income, poverty rate, education, age structure. Use consistent denominators across MSAs to enable fair comparisons.

Appendix B: MSA, Census, and Industry Alignment

(Page 4/5): Industry and labor measures: NAICS and SOC

Use NAICS codes to describe industry exposure (e.g., reliance on construction, manufacturing, hospitality) and SOC codes for occupational exposure. These help explain why some MSAs experience shocks earlier (e.g., tourism downturns, supply-chain disruptions).

Data sources include BLS QCEW (establishments and wages by NAICS), BLS CES/LAUS (employment and unemployment), and BEA income series. For near-real-time, job postings can be used with caution (coverage bias).

When analyzing procurement opacity, NAICS filtering is useful: compare non-competitive award share within sectors to identify unusual surges.

Implementation

Maintain a `dim_industry` table keyed by NAICS2/NAICS6, and an MSA exposure vector (share of employment by sector). Use these as covariates in alert models.

Appendix B: MSA, Census, and Industry Alignment

(Page 5/5): Time windows, baselines, and seasonal adjustment

Many indicators are seasonal (employment, protests, disease, outages). Use weekly and monthly baselines with year-over-year comparisons and z-scores against multi-year history.

Report both **levels** and **changes** (WoW, MoM, YoY) and require cluster corroboration for public alerts.

For transparency, publish the exact baseline window, the smoothing method (if any), and a revision log when source data backfills.

MSA dashboard standard

Each chart should show: last 3-5 years (if available), the baseline band, and explicit revision markers. Provide downloadable CSV extracts for replication.

Appendix C: Indicator Catalog (Page 1/40): Indicators 1-3 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Corporate Governance | Corporate Governance - Indicator 69: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: ≥ 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Corporate Governance | Corporate Governance - Indicator 70: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Corporate Governance | Corporate Governance - Indicator 71: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase $> 15\%$ YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Appendix C: Indicator Catalog (Page 2/40): Indicators 4-6 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Corporate Governance | Corporate Governance - Indicator 72: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Corruption & Ethics | Corruption & Ethics - Indicator 100: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Corruption & Ethics | Corruption & Ethics - Indicator 97: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: >= 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Appendix C: Indicator Catalog (Page 3/40): Indicators 7-9 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Corruption & Ethics | Corruption & Ethics - Indicator 98: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Corruption & Ethics | Corruption & Ethics - Indicator 99: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase > 15% YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Cyber & Digital | Cyber & Digital - Indicator 61: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: >= 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Appendix C: Indicator Catalog (Page 4/40): Indicators 10-12 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Cyber & Digital | Cyber & Digital - Indicator 62: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Cyber & Digital | Cyber & Digital - Indicator 63: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase > 15% YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Cyber & Digital | Cyber & Digital - Indicator 64: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Appendix C: Indicator Catalog (Page 5/40): Indicators 13-15 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Economic & Labor | Economic & Labor - Indicator 29: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: ≥ 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Economic & Labor | Economic & Labor - Indicator 30: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Economic & Labor | Economic & Labor - Indicator 31: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase $> 15\%$ YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Appendix C: Indicator Catalog (Page 6/40): Indicators 16-18 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Economic & Labor | Economic & Labor - Indicator 32: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Education & Campuses | Education & Campuses - Indicator 41: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: >= 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Education & Campuses | Education & Campuses - Indicator 42: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Appendix C: Indicator Catalog (Page 7/40): Indicators 19-21 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Education & Campuses | Education & Campuses - Indicator 43: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase > 15% YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Education & Campuses | Education & Campuses - Indicator 44: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Electoral Process | Electoral Process - Indicator 10: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Appendix C: Indicator Catalog (Page 8/40): Indicators 22-24 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Electoral Process | Electoral Process - Indicator 11: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase > 15% YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

External Influence (Foreign) | External Influence (Foreign) - Indicator 58: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Appendix C: Indicator Catalog (Page 11/40): Indicators 31-33 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

External Influence (Foreign) | External Influence (Foreign) - Indicator 59: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase > 15% YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

External Influence (Foreign) | External Influence (Foreign) - Indicator 60: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Extremism & Militias | Extremism & Militias - Indicator 53: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: >= 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Appendix C: Indicator Catalog (Page 12/40): Indicators 34-36 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Extremism & Militias | Extremism & Militias - Indicator 54: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Extremism & Militias | Extremism & Militias - Indicator 55: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase > 15% YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Extremism & Militias | Extremism & Militias - Indicator 56: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Appendix C: Indicator Catalog (Page 13/40): Indicators 37-39 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Financial System | Financial System - Indicator 105: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: ≥ 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Financial System | Financial System - Indicator 106: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Financial System | Financial System - Indicator 107: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase $> 15\%$ YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Appendix C: Indicator Catalog (Page 14/40): Indicators 40-42 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Financial System | Financial System - Indicator 108: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Oversight & Audits | Oversight & Audits - Indicator 91: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase > 15% YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Oversight & Audits | Oversight & Audits - Indicator 92: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Appendix C: Indicator Catalog (Page 29/40): Indicators 85-87 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Policing & Public Safety | Policing & Public Safety - Indicator 13: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: ≥ 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Policing & Public Safety | Policing & Public Safety - Indicator 14: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Policing & Public Safety | Policing & Public Safety - Indicator 15: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase $> 15\%$ YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Appendix C: Indicator Catalog (Page 30/40): Indicators 88-90 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Policing & Public Safety | Policing & Public Safety - Indicator 16: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Political/Institutional | Political/Institutional - Indicator 1: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: >= 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Political/Institutional | Political/Institutional - Indicator 2: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Appendix C: Indicator Catalog (Page 31/40): Indicators 91-93 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Political/Institutional | Political/Institutional - Indicator 3: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase > 15% YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Political/Institutional | Political/Institutional - Indicator 4: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Protest Dynamics | Protest Dynamics - Indicator 113: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: >= 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Appendix C: Indicator Catalog (Page 32/40): Indicators 94-96 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Protest Dynamics | Protest Dynamics - Indicator 114: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Protest Dynamics | Protest Dynamics - Indicator 115: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase > 15% YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Protest Dynamics | Protest Dynamics - Indicator 116: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Appendix C: Indicator Catalog (Page 33/40): Indicators 97-99 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Real Estate & Land Use | Real Estate & Land Use - Indicator 109: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: ≥ 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Real Estate & Land Use | Real Estate & Land Use - Indicator 110: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Real Estate & Land Use | Real Estate & Land Use - Indicator 111: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase $> 15\%$ YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Appendix C: Indicator Catalog (Page 34/40): Indicators 100-102 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Real Estate & Land Use | Real Estate & Land Use - Indicator 112: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Religious & Cultural Institutions | Religious & Cultural Institutions - Indicator 65: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: >= 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Religious & Cultural Institutions | Religious & Cultural Institutions - Indicator 66: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Appendix C: Indicator Catalog (Page 35/40): Indicators 103-105 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Religious & Cultural Institutions | Religious & Cultural Institutions - Indicator 67: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase > 15% YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Religious & Cultural Institutions | Religious & Cultural Institutions - Indicator 68: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Security/Violence | Security/Violence - Indicator 49: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...)

Threshold: >= 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Appendix C: Indicator Catalog (Page 36/40): Indicators 106-108 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Security/Violence | Security/Violence - Indicator 50: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Security/Violence | Security/Violence - Indicator 51: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase > 15% YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Security/Violence | Security/Violence - Indicator 52: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Appendix C: Indicator Catalog (Page 37/40): Indicators 109-111 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Social/Community | Social/Community - Indicator 17: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: ≥ 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Social/Community | Social/Community - Indicator 18: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Social/Community | Social/Community - Indicator 19: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase $> 15\%$ YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Appendix C: Indicator Catalog (Page 38/40): Indicators 112-114 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Social/Community | Social/Community - Indicator 20: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Transparency & FOIA | Transparency & FOIA - Indicator 93: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: >= 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Transparency & FOIA | Transparency & FOIA - Indicator 94: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Appendix C: Indicator Catalog (Page 39/40): Indicators 115-117 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Transparency & FOIA | Transparency & FOIA - Indicator 95: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase > 15% YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Transparency & FOIA | Transparency & FOIA - Indicator 96: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Tribal/Indigenous Affairs | Tribal/Indigenous Affairs - Indicator 81: Leadership churn

Metric: Churn rate per quarter **Update:** Weekly **Risk:** Medium (may expose individu...

Threshold: >= 2 SD above 3-yr mean

Why it matters: Legitimacy erosion; administrative paralysis

Open data starting points: Local press; official HR notices; council minutes

Detection: Track unplanned departures/appointments in key offices

Safeguards: Publish aggregate trends only; redact PII where possible

Nonviolent response options: Request public explanation; schedule open hearings; publish succession plans

Appendix C: Indicator Catalog (Page 40/40): Indicators 118-120 (sorted by category)

This catalog provides 120 publishable, aggregate indicators for early warning and resilience planning. Each entry lists a primary metric, update cadence, example review threshold, open data starting points, and a rights-respecting response menu.

Tribal/Indigenous Affairs | Tribal/Indigenous Affairs - Indicator 82: Emergency powers expansion

Metric: % of population under emergency orders **Update:** Daily **Risk:** Medium

Threshold: New order without sunset or review

Why it matters: Rights compression; protest escalation

Open data starting points: State register; executive orders; AG opinions

Detection: Diff across baseline authority; flag time-boxed vs open-ended

Safeguards: Link to text; add plain-language summary; solicit public comment

Nonviolent response options: Demand sunset clauses; rapid judicial review; civil-society briefing

Tribal/Indigenous Affairs | Tribal/Indigenous Affairs - Indicator 83: Budget opacity

Metric: Non-competitive award ratio **Update:** Monthly **Risk:** Low

Threshold: Increase > 15% YoY

Why it matters: Watchdog investigations; protests over spending

Open data starting points: Budget docs; procurement portals; single-source awards

Detection: Measure share of non-competitive awards; late audits

Safeguards: Release contracts; machine-readable data; vendor registries

Nonviolent response options: Push for competitive bids; independent audit; community budget forums

Tribal/Indigenous Affairs | Tribal/Indigenous Affairs - Indicator 84: Whistleblower retaliation claims

Metric: Claims per 10k employees **Update:** Monthly **Risk:** High (sensitive allegations)

Threshold: Spike > 2 SD and ≥ 5 cases/mo

Why it matters: Resignations; unrest in agencies; chilling effect

Open data starting points: Court filings; inspector-general tips (aggregate); news

Detection: Count credible claims; cluster by agency

Safeguards: Aggregate only; remove identifiers; secure storage

Nonviolent response options: Legal hotline; protect complainants; appoint special counsel

Appendix D: Worksheets and Templates (Page 1/10): Indicator Specification Sheet

Use this worksheet to standardize public reporting, minimize harm, and ensure the system itself remains legitimate.

Indicator identity

- Indicator name and category
- Owner / maintainer
- Intended use (public, internal, research)
- Civil-liberties risk rating + rationale

Metric definition

- Exact numerator and denominator
- Native geography (county/city/utility territory)
- Publication geography (MSA/county)
- Unit and time window (weekly/monthly)

Thresholds

- Baseline window length (years)
- Alert threshold (z-score, YoY)
- Cluster dependencies (which other indicators must co-occur)

Safeguards

- PII risk analysis and mitigations
- Suppression/noise rules for small counts
- Appeals / corrections pathway

Appendix D: Worksheets and Templates (Page 2/10): Data Provenance and Reproducibility Log

Use this worksheet to standardize public reporting, minimize harm, and ensure the system itself remains legitimate.

Source record

- Source URL/API + license
- Fetch timestamp and checksum
- Raw file retention period
- Known revisions/backfills

Transform record

- Code version hash
- Normalization steps
- Geo crosswalk version
- Validation checks (schema, nulls, range)

Publication record

- Aggregation level (MSA/county)
- Coverage note
- Date published and change log

Appendix D: Worksheets and Templates (Page 3/10): Cluster Alert Review Worksheet

Use this worksheet to standardize public reporting, minimize harm, and ensure the system itself remains legitimate.

Cluster definition

- List the indicators in the cluster
- Why the cluster matters (mechanism)
- Required co-occurrence window (e.g., 2 weeks)

Evidence check

- Are at least two sources independent?
- Is there a plausible non-conflict explanation (holiday, storm)?
- Are there known data gaps this month?

Action framing

- Nonviolent interventions to recommend
- Resources/contacts to list publicly
- What NOT to imply (no guilt by association)

Appendix D: Worksheets and Templates (Page 4/10): MOE vs MOP Measurement Plan

Use this worksheet to standardize public reporting, minimize harm, and ensure the system itself remains legitimate.

MOPs (outputs)

- Messages sent, hearings held, audits opened (track but do not optimize)

MOEs (effects)

- Complaint resolution time
- Service uptime
- Participation in lawful channels
- Survey trust indices

Evaluation design

- Before/after baselines
- A/B message testing (opt-in)
- Equity analysis by subgroup (aggregate)

Appendix D: Worksheets and Templates (Page 5/10): Bias and Coverage Audit

Use this worksheet to standardize public reporting, minimize harm, and ensure the system itself remains legitimate.

Coverage

- Which counties/MSAs are missing data?
- Is reporting uneven across agencies?
- Are rural areas undercounted?

Bias risks

- Does the indicator track enforcement intensity rather than harm?
- Could it stigmatize a group?
- Is it sensitive to media attention rather than reality?

Mitigations

- Publish confidence ratings
- Prefer ground truth series
- Use cluster corroboration

Appendix D: Worksheets and Templates (Page 6/10): Civil Liberties Impact Assessment

Use this worksheet to standardize public reporting, minimize harm, and ensure the system itself remains legitimate.

Data minimization

- Is the geography coarse enough?
- Are small counts suppressed?
- Is there any individual-level data? (If yes, stop.)

Speech and association

- Does the measure risk labeling lawful dissent?
- Are proxies being mistaken for intent?
- Are you relying on ToS-sensitive sources?

Oversight

- Independent review board sign-off
- Appeals process
- Annual external audit

Appendix D: Worksheets and Templates (Page 7/10): Public Release Note Template (one-page)

Use this worksheet to standardize public reporting, minimize harm, and ensure the system itself remains legitimate.

What changed

- Indicator(s) updated
- Reason for update
- Data revision/backfill notes

What we observe

- Trend summary in plain language
- Which cluster triggered review (if any)
- Confidence rating

What we recommend (nonviolent)

- Where to get help/resources
- How to file complaints or attend hearings
- De-escalation and safety guidance

What we do NOT claim

- No accusations of individuals
- No claims of intent
- No claims beyond evidence

Appendix D: Worksheets and Templates (Page 8/10): Appeals and Correction Workflow

Use this worksheet to standardize public reporting, minimize harm, and ensure the system itself remains legitimate.

Intake

- Public form/email for corrections
- Required evidence types (links, official docs)
- Expected response timeline

Review

- Two-person review
- Community input where relevant
- Documented decision

Publish

- Correction note linked to the original chart
- Versioned dataset update
- Reason for correction

Appendix D: Worksheets and Templates (Page 9/10): Partner Ecosystem Map (MSA)

Use this worksheet to standardize public reporting, minimize harm, and ensure the system itself remains legitimate.

Government accountability

- Inspectors General
- Public defenders
- Ethics boards
- Procurement oversight

Civil society

- Legal aid orgs
- Mutual aid networks
- Mediation/restorative justice groups
- Local journalism

Service resilience

- Utilities contacts
- Public health
- Shelter/housing providers
- Transit agencies

De-escalation

- Protest liaison teams
- Trained observers
- Community safety teams

Appendix D: Worksheets and Templates (Page 10/10): Quarterly Retrospective

Use this worksheet to standardize public reporting, minimize harm, and ensure the system itself remains legitimate.

Signal quality

- False positives and causes
- Missed events and causes
- Indicators to retire or revise

Equity check

- Were certain areas or groups systematically mismeasured?
- Were resources distributed fairly?
- Any harm caused by publication?

Governance

- Audit results
- Appeals summary
- Transparency improvements for next quarter
